Mar 3, 2022 Version 3.7.3 I have to use this email service with my company so I got the app. The signature on the app only allows text. I would like to be able to put my company logo in the signature. Also, there should be a way to run two email accounts off the app. This is a very crucial feature especially since when I set mail forwarding from one account on the website it doesn't work. ...Otherwise it is a pretty good email application. I have the app on both my phone and iPad, but when I go to type an email, I can't rotate the screen to use the large keyboard. Other than that, it is a goo mail app. We recently realized that sometimes there is no notice when received an email. This is confusing and has some impact on usage. Can you please check and fix?Thanks! The developer, ALIBABA (CHINA) CO., LTD, indicated that the app's privacy practices may include handling of data as described below.
